Guided Implant Surgery Systems refer to digital technologies and tools used to precisely plan and execute dental implant placement using preoperative imaging, virtual planning software, and surgical guides. These systems integrate 3D imaging data—typically from Cone Beam Computed Tomography (CBCT)—with CAD/CAM software to create a digital model of the patient's oral anatomy. Based on this model, a virtual implant placement plan is developed, and a custom surgical guide (a physical or digital template) is fabricated to ensure accurate drilling and implant insertion during the procedure.
