Guided Wave Radar (GWR) is a non-contact level measurement technology that utilizes microwave technology to accurately measure the level of liquids, solids, and slurries in various industrial applications. By transmitting low-energy microwave pulses down a probe and measuring the time it takes for the reflected signal to return, GWR devices can determine the level of the medium with high precision. This technology is unaffected by changes in pressure, temperature, or media density, making it a reliable solution for a wide range of applications, including process industries, power generation, food and beverage, and wastewater treatment.

United States market for Guided Wave Radars is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
