The global Gun Silencers market size is predicted to grow from US\$ 380 million in 2025 to US\$ 539 million in 2031; it is expected to grow at a CAGR of 6.0% from 2025 to 2031.

A gun silencer, also known as a sound suppressor, suppressor, or sound moderator, is a muzzle device that suppresses the blast created when a gun (firearm or airgun) is discharged, thereby reducing the acoustic intensity of the muzzle report (sound of a gunshot) and jump, by modulating the speed and pressure of the propellant gas released from the muzzle. Like other muzzle devices, a silencer can be a detachable accessory mounted to the muzzle, or an integral part of the barrel.

The North American market, particularly the United States, is a significant driver of growth in the gun silencer market. The region has a high rate of firearm ownership and a strong demand for shooting accessories.
