Abstracts

The global Gynaecology and Obstetric Electric Operating Tables market size is predicted to grow from US\$ 366 million in 2025 to US\$ 515 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

The electric operating table for obstetrics and gynecology is specialized medical equipment designed for childbirth, Cesarean sections, gynecological examinations, and surgical procedures. Utilizing electric controls, it facilitates precise adjustments including height elevation, tilting, and the positioning of backrests and leg rests thereby enhancing surgical convenience and patient comfort.

The upstream supply chain comprises materials such as steel, aluminum alloys, electric motors, control systems, hydraulic and electric actuators, medical-grade upholstery, and electronic components. The downstream market primarily targets hospital obstetrics and gynecology departments, maternal and child health centers, specialized clinics, surgical centers, and medical device distribution channels.

Globally, the average unit price for electric operating tables in the obstetrics and gynecology sector stands at approximately \$5,500. Global sales volume is estimated at around 68,000 units, with an annual production capacity ranging from 80,000 to 100,000 units; the industry profit margin is approximately 25%.

Future Global Market Trends:

The global market for electric operating tables in obstetrics and gynecology is trending toward greater intelligence, enhanced patient comfort, and multifunctional integration. Driven by the increasing sophistication of gynecological surgeries, the growing

prevalence of painless delivery methods, and the ongoing modernization of hospital operating rooms, future products will place greater emphasis on precise electric adjustability, robust load-bearing stability, the use of antimicrobial and easy-to-clean materials, and ergonomic design. Concurrently, improvements in hospital infrastructure within developing nations are expected to drive increased demand for mid-range products, while the high-end market will focus more intently on synergistic integration with medical imaging equipment, anesthesia systems, and digital operating room environments.
