Gypsum board is the generic name for a family of panel products that consist of a noncombustible core, composed primarily of gypsum, and a paper surfacing on the face, back and long edges. Gypsum board is one of several building materials covered by the umbrella term “gypsum panel products.” All gypsum panel products contain gypsum cores; however, they can be faced with a variety of different materials, including paper and fiberglass mats.

Gypsum board is often called drywall, wallboard, or plasterboard. It differs from other panel-type building products, such as plywood, hardboard, and fiberboard, because of its noncombustible core and paper facers. When joints and fastener heads are covered with a joint compound system, gypsum wall board creates a continuous surface suitable for most types of interior decoration.

The major players in global Gypsum Board market include Saint-Gobain, Etex Corp, Knauf, etc. The top 3 players occupy about 35% shares of the global market. Europe and North America are main markets, they occupy about 40% of the global market. Regular is the main type, with a share about 60%. Residential is the main application, which holds a share about 45%.
