The global Gypsum Powder for Construction market size is predicted to grow from US\$ 895 million in 2025 to US\$ 1112 million in 2032; it is expected to grow at a CAGR of 3.2% from 2026 to 2032.

Gypsum Powder for Construction is a fine powder material made from natural gypsum ore through crushing, calcining and other processes. It is mainly used in construction and decoration. Its main component is dihydrate gypsum ($\text{CaSO}_4 \cdot 2\text{H}_2\text{O}$), which is converted into anhydrous gypsum (CaSO_4) after calcination at high temperature, and then ground to obtain the required fineness.

The construction gypsum powder industry is at the intersection of green transformation and technological innovation. The recovery of the global construction industry and the deepening of environmental protection policies have jointly promoted its accelerated evolution towards high performance and multi-functionality. International giants such as Germany's Knauf and France's Saint-Gobain dominate the high-end market with their global layout, and Chinese companies such as Wengfu Group, Yongtai Gypsum, and Longyuan Gypsum continue to expand their market share through differentiated paths.

As the construction industry's requirements for material quality continue to increase, construction gypsum powder manufacturers need to strengthen product quality control to ensure compliance with national and industry standards. The increase in environmental awareness has prompted the construction gypsum powder industry to pay more attention to sustainability in the production process. Adopting environmentally friendly production processes, reducing resource consumption and reducing carbon

emissions have become important trends in the industry. At the same time, research on the recycling of gypsum powder is also constantly advancing, aiming to achieve the recycling of resources.
