The global Gyrotory Compactors market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Gyrotory Compactors are specialized machines used in the preparation of asphalt concrete specimens for laboratory testing. They simulate the compaction process that occurs in the field, allowing for the evaluation of the density and stability of asphalt mixtures. Gyrotory compactors use a rotating and oscillating motion to compact asphalt samples in a cylindrical mold. This mimics the traffic loads that asphalt pavements experience over time. Primarily used in the design of asphalt mixtures, helping to determine optimal binder content and aggregate gradation. Essential for producing samples for various performance tests, such as stability, flow, and durability assessments.

United States market for Gyrotory Compactors is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
