According to our LPI (LP Information) latest study, the global Gyroplanes market size was valued at US\$ 55 million in 2023. With growing demand in downstream market, the Gyroplanes is forecast to a readjusted size of US\$ 64 million by 2030 with a CAGR of 2.1% during review period.

The research report highlights the growth potential of the global Gyroplanes market. Gyroplanes are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Gyroplanes. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Gyroplanes market.

Gyroplane, also known as an gyrocopter, is an aircraft that optically resembles a helicopter. Contrary to a helicopter, a gyrocopter also features a propeller that provides forward thrust. And unlike a helicopter, the gyrocopter's rotor is not engine-powered during flight, but merely passively powered by airstream that results from the forward propulsion. This is the so-called autorotation. Because of their lightweight and compact construction, gyrocopters are classified as Ultralight Aircrafts, which leads to considerable cost advantages of flight operations and also with regard to obtaining a flight license.
