The global Gyroscope Sensors for Optical Image Stabilizer (OIS) market size is predicted to grow from US\$ 191 million in 2025 to US\$ 282 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

Gyroscopic sensors ("gyro sensors"), also known as angular velocity sensors, can detect changes in rotation angle per unit of time. This makes it possible to detect quantities such as the direction of rotation, rotation angle, and vibration. Gyro sensors are found in smartphones, digital cameras, game consoles, car navigation systems, robots, industrial equipment, and wherever else features such as vibration detection, camera shake correction, and attitude control are needed.

Optical image stabilization is a technology used in cameras and smartphones to reduce the effects of camera shake and other types of motion blur in photos and videos. This technology works by combining sensors and microprocessors to detect and correct camera movement, resulting in sharper, more stable images.

This report studies the Gyroscope sensors, used for Optical Image Stabilizer (OIS) in cameras in the smartphone, Digital Cameras, and Action Cam, etc.
