The global Gyroscopic Game Controllers market size is projected to grow from US\$ million in 2022 to US\$ million in 2029; it is expected to grow at a CAGR of % from 2023 to 2029.

With the popularity of Nintendo's Splatoon game, the application of the motion sensing function of the handle in FPS shooting games has received more attention. At the same time, the development of gyroscope technology has improved its functionality and reduced cost in consumer electronics products. Under the background of Covid-19, the development of the industry has stagnated, but home isolation has broadened the consumer market of the video game industry. It is expected that with the expansion of the game market, the market prospect of the gyroscope game controller is very optimistic.

A Game Controller (also called gamepad) is typically the main input device for video game consoles. Gyroscopic Game Controllers have built-in gyroscopes that provide motion sensing for controllers.
