## Abstracts

The global H-Beam Straightening Machine market size is predicted to grow from US\$ 570 million in 2025 to US\$ 916 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

In 2025, global sales of H-beam straightening machines reached 11,200 units, with an average selling price of US\$52,000. An H-beam straightening machine is a specialized piece of equipment used to straighten the warping, bending, and twisting of H-beam flanges and webs after welding or hot rolling. It achieves high-precision straightening of H-beams of different specifications through hydraulic pushers, groups of straightening rollers, and an intelligent force control system. Its upstream raw materials include medium and heavy plate structural steel, hydraulic cylinders and pump stations, high-pressure oil pipes, electrical control assemblies, sensor systems, and wear-resistant rollers. The downstream supply chain mainly serves steel structure processing companies, construction steel manufacturers, large bridge component manufacturers, wind turbine tower manufacturers, and heavy equipment structural component manufacturers. The global total production capacity is approximately 20,000 units per year, with an industry gross profit margin between 20% and 27%. In downstream consumption, building steel structures account for approximately 45%, bridge and rail transit structures for 28%, energy equipment (wind power, petrochemical structures) for approximately 17%, and other heavy industry sectors for 10%. Upstream material consumption is mainly comprised of structural steel components (approximately 52% of costs) and hydraulic components (approximately 26%). Regarding demand and opportunities, with the increasing global penetration rate of steel structure buildings, the increasing size of wind turbine towers, and the rapid development of ultra-large components in marine engineering and bridges, the demand for high-strength H-beams continues to expand, driving the replacement of older, more automated H-beam

straightening machines with higher tonnage models. Strong infrastructure investment in Asia (especially China and India), the Middle East, and North America will be the main source of increased demand over the next five years. Intelligent straightening systems, automatic roller changing devices, and online shape measurement systems represent new profit growth points for equipment manufacturers.
