The global H-bridge Motor Controllers market size is predicted to grow from US$ 3949 million in 2025 to US$ 5542 million in 2031; it is expected to grow at a CAGR of 5.8% from 2025 to 2031.

H-bridge drivers are a long established means for enabling bidirectional motor driving. By using one, rotation of the motor can be driven, and the polarity of the supply to the motor can be swapped in order to change the direction of rotation. It can also take care of braking, when this is required.

An H-bridge is an electronic circuit that switches the polarity of a voltage applied to a load. These circuits are often used in robotics and other applications to allow DC motors to run forwards or backwards. The name is derived from its common schematic diagram representation, with four switching elements configured as the branches of a letter 'H' and the load connected as the cross-bar.
