The global HAE Treatments market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

HAE (Hereditary Angioedema) treatments aim to manage and prevent the unpredictable and potentially life-threatening swelling episodes associated with the condition. These treatments target the underlying cause: a deficiency or dysfunction of C1 esterase inhibitor (C1-INH), which leads to uncontrolled activation of the complement and kallikrein-kinin systems, resulting in swelling. There are three main categories of HAE treatments: C1-INH replacement therapies (e.g., Berinert, Haegarda) that restore functional C1-INH levels; kallikrein inhibitors (e.g., Ecallantide) that block the enzyme responsible for bradykinin production; and bradykinin B2 receptor antagonists (e.g., Icatibant) that prevent bradykinin from causing vascular permeability and swelling.

United States market for HAE Treatments is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
