## Abstracts

The global Half Head Model with Neck market size is predicted to grow from US\$ 370 million in 2025 to US\$ 508 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

In 2025, global Half Head Model with Neck production reached approximately 1.11 M Units. The average price is approximately \$340. Half Head Model with Neck is a physical three-dimensional anatomical model used for medical teaching and clinical training. It systematically demonstrates the internal and external anatomical relationships of the head and neck by cutting the human head in a sagittal plane (half-head structure) and extending it to the neck region.

### Gross Profit Margin Level

Regarding gross profit margin, this segmentation is more suitable for estimation based on brand level and channel price differences. Combining the list prices of high-end European and American brands, the quotations of Asian own-brand products, and the prices of locally manufactured products in India, I estimate that the weighted average gross profit margin of the half-head model (with neck) industry is typically in the range of 40%-55%. Among them, high-end European and American brands, due to their strong brand, teaching content, hand-painting, and channel premiums, often achieve gross profit margins of 55%-70%; Asian own-brand manufacturers typically have a gross profit margin of 35%-55%; while OEM/regional export manufacturers often fall between 25%-40%. The essence of this structure is: the product unit volume is not large, the SKUs are mostly long-tailed, and the added value of teaching instructions and model details is high, so high-end brands can maintain a strong premium; however, the mid-to-low-end market faces the generalization and homogenization of PVC/HSP resin

materials and bidding price pressures, leading to a lower profit center. The above is an industry estimate based on publicly listed prices and product level differences.

## Industry Drivers

The growth of the half-head model (with neck) industry stems primarily from the rigid demand in medical education and clinical training. The anatomy of the head and neck is complex, involving multiple layers of structures such as facial muscles, blood vessels and nerves, the upper airway, the brain, and the cervical spine. Two-dimensional atlases alone are insufficient for efficient teaching; therefore, medical schools, nursing education institutions, hospital science education centers, and skills training centers have a long-standing need for these physical models. Secondly, the increasing demand for specialized teaching in otolaryngology, dentistry, anesthesiology, and head and neck surgery has increased the value of half-head models with the throat, upper airway, and blood vessels and nerves. Thirdly, high-fidelity materials and product upgrades are also significant drivers. Soft silicone, highly detailed blood vessels and nerve displays, and detachable hemispheres/multi-part designs are upgrading these products from 'basic teaching aids' to 'professional teaching and clinical communication tools.' Finally, popular science exhibitions, museum education, and international small-batch procurement are also bringing incremental growth to Chinese and Indian manufacturers, making the parallel development of mid-to-high-end proprietary brands and OEMs more apparent.
