A half-row berry harvester is an agricultural machine designed to harvest berries from only one side of a row of plants at a time. Unlike full-row harvesters, which cover the entire row width in a single pass, half-row harvesters are narrower and typically require two passes to harvest both sides of the row. These machines are often used in smaller-scale farming operations, in fields with narrow row spacing, or in areas where maneuverability is important. Half-row berry harvesters are typically more compact and less expensive than full-row models, making them suitable for farms with less extensive berry acreage or challenging terrain. They are commonly used to harvest berries such as blueberries, raspberries, and blackberries.
