The global Halide Crystal Substrate market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Sodium chloride, potassium chloride, potassium bromide single crystal texture is uniform, bright and transparent, has a high transparency to infrared, thickness is less than 10mm, in the range of 4000-500cm⁻¹ transmittance is greater than 90%, no impurity absorption.

It is a good conductor of wide band from ultraviolet to middle infrared. Widely used in infrared spectrum analysis and production of ultraviolet, infrared optical components. These single crystals are materials for making optical components, and can be used as prisms, lenses, filters, and transparent materials for various pool Windows and laser Windows in infrared devices and optical instruments. At the same time, such crystals are also important film substrate materials, especially for 'film-base' separation applications, such water-soluble substrates can easily dissolve the substrate with water, leaving only the film.

United States market for Halide Crystal Substrate is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
