Hall magnetic sensing chip is an electronic device that measures the strength and direction of a magnetic field using the Hall effect principle. The Hall effect occurs when a magnetic field is applied perpendicular to the flow of current in a conductor or semiconductor, generating a voltage (the Hall voltage) transverse to the current. Hall magnetic sensing chips use the Hall effect to detect and measure magnetic fields and are widely used in automotive electronics, consumer electronics, industrial automation, medical instruments, and security monitoring. Depending on the application, these chips come in various types, including switching, linear, micropower, speed, angle, and current sensing, offering precise and durable non-contact sensing solutions.

The global Hall Magnetic Sensing Chip market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
