Heat shrink tubing is a thermoplastic tube that shrinks when exposed to heat. Halogen-free heat shrink tubing is defined as bromine and chlorine content less than 900ppm respectively. Halogen free heat shrink tubing is different from heat shrink tubing containing halogen on a number of important points. When halogen free heat shrink tubing catches fire and burns, almost no poisonous gasses are released. In addition, halogen free heat shrink tubing barely generates smoke when burning. Halogen-free flame retardant heat shrink tubing is added with flame retardant materials and has flame retardant properties.
