The global Halogen-free Flame Retardant PBT market size is predicted to grow from US\$ 524 million in 2025 to US\$ 675 million in 2032; it is expected to grow at a CAGR of 3.7% from 2026 to 2032.

Halogen-free Flame Retardant PBT (Polybutylene Terephthalate) refers to a type of PBT polymer that incorporates flame retardant additives without the use of halogen-based compounds. Halogens, such as bromine and chlorine, have traditionally been used as flame retardants, but there is a growing concern about the environmental and health impacts associated with the release of halogenated compounds during combustion. As a result, halogen-free flame retardants are gaining popularity in various industries.

Stringent Regulations and Standards: Increasing awareness of environmental and health concerns has led to the development of stringent regulations and industry standards regarding the use of flame retardants. This has driven the adoption of halogen-free alternatives in various applications.

Electronics and Electrical Applications: The electronics and electrical industry is a significant consumer of Halogen-free Flame Retardant PBT. With the increasing use of electronic devices and the need for fire-safe components, there is a growing demand for flame-retardant polymers in this sector.

Automotive Industry: Halogen-free Flame Retardant PBT is also gaining traction in the automotive industry, where safety standards are high, and the demand for flame-retardant materials is increasing for various interior and under-the-hood components.

Consumer Goods: The use of Halogen-free Flame Retardant PBT is expanding in consumer goods such as appliances and housing components where flame retardancy is a crucial consideration.
