Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

The halogen moisture analyzer adopts the principle of loss-on-drying method to quickly heat the sample through the heating system, so that the moisture in the sample can be evaporated in a short time, so that the moisture content of the sample can be detected in a short time. During the drying process, the rapid moisture analyzer continuously measures and immediately displays the lost moisture content of the sample in %. After the drying process is completed, the final measured moisture content value is locked and displayed. It usually only takes about 3 minutes to detect general samples. The test results are replaceable, and the instrument adopts one-button operation, which is not only easy to operate but also avoids errors caused by human factors on the measurement results.

The global market for Halogen Moisture Analyzer is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028.
