Hand-free gel disinfectant is a product used for hand disinfection. It usually contains alcohol (such as ethanol or isopropyl alcohol) and other ingredients (such as moisturizers, fragrances, etc.), which can effectively kill bacteria and viruses on hands. The main feature of this disinfectant is that it is easy to use, does not require cleaning with water and towels, and is suitable for use in environments without water sources. To use, squeeze an appropriate amount of gel onto dry palms and rub around your palms, fingers and nails to ensure the entire hand is covered until the gel dries naturally. This product is widely used in daily life, hospitals, schools, public places, etc. to help reduce the risk of infection.

In recent years, the market demand for hand-free gel disinfectant has grown significantly around the world, especially after the COVID-19 epidemic. As a convenient, efficient, and non-rinsing hand disinfection product, it is widely used in public places, homes, medical institutions, transportation and other fields, and has become an important product for daily hygiene protection. Affected by the epidemic, the public's attention to hand hygiene has increased significantly, and the market size of hand-free gel disinfectant has expanded rapidly. In addition to personal daily use, the purchasing demand of enterprises, government agencies, and medical institutions has also gradually increased. North America leads the hand-free disinfectant gel market, accounting for 35% of the total revenue, followed by Europe at 30%, Asia Pacific at 25%, Latin America at 5%, and the Middle East and Africa at 5%. The fastest growing region is Asia Pacific, driven by increased demand and health awareness.
