Handheld ammonia gas detector is a portable device designed to detect and measure the concentration of ammonia gas in the air. It is commonly used in industrial settings, such as fertilizer plants, refrigeration systems, and food processing facilities, where the potential for ammonia leaks or releases poses a safety hazard to workers and the environment. The detector typically uses electrochemical sensors or infrared sensors to detect the presence of ammonia gas in the air. The electrochemical sensor works by

reacting with the ammonia gas to produce an electrical signal, which is then converted into a concentration reading.
