A Handheld Brix Meter is a portable optical instrument used to quickly determine the sugar content (in °Brix) in liquids. It is widely used in the food and beverage, agriculture and pharmaceutical industries. Its working principle is based on the refraction method or digital density method. The sugar concentration is converted by measuring the refractive index of the sample. Some models can simultaneously detect the temperature and perform automatic compensation. The device is easy to operate, has a fast response (3 seconds) and a small sample volume (0.3-1mL), and complies with ISO 2173, AOAC and other standards.
