The hand-held continuity tester is a portable electronic testing instrument, which is used to test the continuity in the circuit and judge whether the circuit is on or off. It is commonly used in jobs such as electrical repair, installation and troubleshooting. A handheld continuity tester can perform a test by connecting the tester's probes or test leads to two points in the circuit. When the circuit is normal, the tester will make a sound or the indicator light will be on, indicating that the circuit is unblocked. If there is an open or break in the circuit, the tester will not sound or light to alert the user that there is a problem.
