The global Handheld DPM Code Reader market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Direct part marking (DPM) barcode scanners and mobile computers are equipped with imagers capable of reading barcodes that are etched or imprinted directly into the surface of materials such as plastic and metal. Handheld DPM code reader features fast scanning and reading stability.

The Handheld DPM Code Reader is a specialized device designed for the reading of barcodes or data matrices directly marked on items through the Direct Part Marking (DPM) process. DPM technology finds extensive applications in the manufacturing sector, particularly in industries such as automotive, aerospace, and electronics. This technology involves directly engraving, embossing, or etching identifications onto the surface of components, ensuring durability and traceability. Leveraging advanced optical and image processing techniques, the handheld DPM code reader can accurately decode these markings across various surfaces and environmental conditions, excelling even under low-light or high-reflection scenarios.
