The global Handheld Galvanometer Laser Welding Machine market size is predicted to grow from US$ 175 million in 2025 to US$ 363 million in 2032; it is expected to grow at a CAGR of 11.2% from 2026 to 2032.

In 2024, the global production of handheld galvanometer laser welding machines will reach 6,400 units, with an average selling price of US$25k per unit.A handheld galvanometer laser welder is a new type of welding equipment that combines handheld laser welding technology with a galvanometer scanning system. It utilizes a high-energy-density laser beam as a heat source, flexibly operated via a handheld welding torch. A high-speed galvanometer scanning head is installed at the end, enabling the laser beam to rapidly oscillate within a small area, performing spot welding, seam welding, or filler welding. Compared to traditional fixed or oscillating lens handheld welding, the galvanometer system offers advantages such as uniform welds, controllable penetration depth, high efficiency, and strong compatibility with heat-sensitive materials. It is particularly suitable for applications requiring high weld consistency, appearance, and heat-affected zone (HAZ).

The upstream suppliers of handheld galvanometer laser welding machines primarily include core components such as fiber lasers (IPG Photonics, nLIGHT, Raycus), galvanometer scanner heads and optical elements (Scanlab, Raycus, Hymxing), cooling systems and optical protection lenses (II-VI, Coherent), and high-precision servo and control systems (Siemens, Beckhoff, Yaskawa Electric). These systems are widely used in industries such as metal processing, home appliances and kitchenware, automotive parts, rail transit, new energy batteries, advertising and decoration, and aerospace. Typical users include BYD, Tesla, Haier, Midea, Toyota, and Bosch. Overall, by integrating high-performance upstream optoelectronic components and control systems,
