The global Handheld Laser Methane Detectors market size is predicted to grow from US\$ 100 million in 2025 to US\$ 143 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

Laser Gas Detectors are devices that detect gas concentrations at a long distance. Users do not need to approach the detection point. The detectors can emit lasers to the detection point to measure the gas concentration between the detection point and the instrument. Generally, most of the distances are 50m/100m/150m, and the maximum can reach 200m or more.

Detectors measure the concentration of special gases based on the principle of TDLAS technology. TDLAS technology is not affected by the surrounding detection environment, ensuring the high stability of the detection of specific gas concentrations. For example, Laser Methane Detectors can only detect the concentration of methane, avoiding the influence of the surrounding mixed gas concentration and achieving accurate detection.

Handheld Laser Methane Detectors are portable devices that use laser technology to remotely measure and monitor gas concentrations. Handheld Laser Methane Detectors are calibrated and precisely designed to provide reliable measurement results.

With the development of downstream industries such as oil and gas, and chemicals, it is necessary to detect the gas concentration around the factory to ensure safety. For example, for oil and gas pipeline systems, Laser Methane Detectors can be used to monitor the gas concentration in the pipeline, especially harmful gases or leaking substances. It can help to detect pipeline leaks or abnormal conditions in a timely

manner, and take timely measures to repair them.

Laser Methane Detectors are generally handheld, fixed, and vehicle/aircraft mounted. Different types have different effects, and there are also large differences in prices. Handheld is a more affordable device, with a price range of 10,000-40,000 RMB. Handheld is generally used for inspections, such as factory inspectors, government inspectors, etc.

At present, the market is still dominated by handheld Laser Methane Detectors, with a market share of 61% in 2023. The main advantages are convenience and affordable prices.
