The global Handheld Reference Thermometer market size is predicted to grow from US\$ 25.7 million in 2025 to US\$ 43.55 million in 2032; it is expected to grow at a CAGR of 8.0% from 2026 to 2032.

Reference thermometers (standard thermometers) are very high accuracy temperature sensors often with included hand-held readout instruments. Reference thermometers are calibrated to UKAS standards to provide the highest accuracy possible. A reference thermometer can be used for a comparison calibration, where the reference thermometer and the temperature sensor to be tested are both placed in a stable heat source such as a water bath. The tested temperature sensors readings can be checked against the reference thermometers readings to determine how accurate the temperature sensor is.

Handheld devices are less expensive compared to desktop devices, which are primarily used in the field of scientific research and development owing to their enhanced accuracy. Handheld devices are preferred by technicians due to their usefulness in unreachable areas and precise measurements. Although desktop devices are expensive, they are used for calibrating temperature sensors for precise measurements.
