The global Handheld Tungsten Electrode Grinder market size is predicted to grow from US$ 123 million in 2025 to US$ 150 million in 2031; it is expected to grow at a CAGR of 3.3% from 2025 to 2031.

Handheld tungsten electrode grinder is a device used to grind the tip of tungsten needles. It is mainly used to improve welding quality and extend the service life of tungsten electrodes. The traditional tungsten needle grinding method is usually manual grinding on an ordinary grinder. This method is difficult to ensure uniform shaping of the tungsten electrode tip, and has problems such as strong vibration and dust pollution. By using a diamond grinding disc, the handheld tungsten needle sharpening machine can obtain a high-quality surface, reduce dust pollution, and is easy to operate and easy to carry. The main functions of the handheld tungsten electrode grinder include grinding, cutting off and end plane processing. It can adjust the grinding angle as needed. Usually the angle range is between 20-60 degrees and is suitable for tungsten needles of different diameters (such as 1.0, 1.6, 2.0, 2.4, 3.2, 4.0, 4.8, 6.0mm).

United States market for Handheld Tungsten Electrode Grinder is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Handheld Tungsten Electrode Grinder is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

Europe market for Handheld Tungsten Electrode Grinder is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
