A handheld water-saving shower head is a type of shower fixture designed to be held in the hand and maneuvered easily, allowing for targeted water flow. It features a mechanism or design that reduces the amount of water used during a shower without compromising water pressure. This is typically achieved through technology such as aeration, flow restrictors, or specific nozzle designs that mix air with water or create finer water streams, thus reducing the overall water consumption. These shower heads are popular for their versatility and eco-friendly benefits, contributing to water conservation and lower utility bills.

The global Handheld Water-saving Shower Head market size is projected to grow from US\$ 1044 million in 2024 to US\$ 1537 million in 2030; it is expected to grow at a CAGR of 6.7% from 2024 to 2030.
