The global Handling Tug Supply Vessels (AHTS) market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The anchor handling tug is a naval vessel that is solely concerned with the objective of either tugging or towing an oil-rig or a ship. When it comes to oil rigs, these tugs form the most important necessity as without their help, it would be impossible to place oil rigs in the required sea and oceanic areas.

The industry trend for AHTS vessels has witnessed ups and downs in recent years. The demand for these vessels largely depends on the overall health of the oil and gas sector. During periods of oil price volatility, there has been a decline in exploration and production activities, leading to reduced demand for AHTS vessels. However, with the recovery of the oil and gas industry, the demand for AHTS vessels is expected to increase. The development of new deep-water fields and offshore wind farms also offers potential growth opportunities for the AHTS vessel market. In addition, there is a growing focus on using environmentally friendly and more fuel-efficient vessels, which is likely to shape the future trends in AHTS vessel design and technology.
