A hands free door opener is a simple yet effective way to decrease the transmission of germs and bacteria. With the current spread of the coronavirus throughout the world a germ free door opener decreases the need for people to make contact with doors and door handles.

Many people are concerned with catching a virus or being exposed to germs. Door handles are among the most germ-infested objects and research shows contamination of just a single doorknob can help spread germs throughout office building, hotels, schools and more facilities within hours.
