The global Hanger Bearing market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Hanger bearings are used as rotational bearings for drive and screw-conveyor shafts. Typically, these industrial shafts are enclosed with a housing or conveyor trough. Hanger bearings are comprised of a split-roller bearing in a cast iron split-housing with a threaded boss that provides suspension for the conveyor cross-bracing. A swivel fixing at the cross-bracing joint is recommended to provide alignment of the bearings. Frames for hanger bearings mount at the top or to the side of the housing. The bearing is suspended to the center for shaft mounting. Hanger bearings are used extensively in agricultural applications and heavy industry. They are also used in automotive assemblies, aircraft assemblies, and marine driveshaft assemblies.

United States market for Hanger Bearing is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
