Hardstock interesterified fats are solid fat components that have undergone chemical or enzymatic rearrangement of fatty acids within triglyceride molecules to achieve specific melting, crystallization, and textural properties. In 2025, global production reached approximately 5,643K ton, with an average global market price of around USD 2,000 per ton. A factory gross profit of USD 400 per ton with 20% gross margin. A single line full machine capacity production is around 30K ton per line per year. The upstream is dependent on palm oil, lauric oil and catalysts. The downstream demand is concentrated in foodservice and retail. Liquid vegetable oils blend with a small amount of IE hardstock to mimic the texture of butter without needing trans fats. US and Canada market are driven by strict FDA mandates eliminating trans fats. India and China market are driven by massive food processing and bakery sectors.
