Hardware monitoring software facilitates the monitoring and tracking of hardware performance. This visibility enables users to identify and solve any potential performance issues as well as track changes in the hardware's operational capacity over time. Such transparency is made possible by monitoring elements—such as CPU and GPU temperature, fan speeds, voltages, and more—and then comparing the monitored items to the ideal performance benchmarks of the hardware itself.

The global Hardware Monitoring Software market size is projected to grow from US\$ 280.8 million in 2023 to US\$ 484 million in 2030; it is expected to grow at a CAGR of 8.1% from 2024 to 2030.

LPI (LP Information)' newest research report, the “Hardware Monitoring Software Industry Forecast” looks at past sales and reviews total world Hardware Monitoring Software sales in 2023, providing a comprehensive analysis by region and market sector of projected Hardware Monitoring Software sales for 2024 through 2030. With a transparent methodology based on hundreds of bottom-up qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global Hardware Monitoring Software.

The future market trends of hardware monitoring software are expected to be influenced by the following factors:

The increasing demand for edge computing and Internet of Things (IoT) devices that can process and transmit data at the source without relying on centralized servers or cloud services. Edge computing and IoT devices require hardware monitoring software that can monitor the health and performance of various sensors, actuators, gateways, and other devices that are distributed across different locations and environments. Hardware monitoring software can help users to ensure the reliability, security, and efficiency of edge computing and IoT devices.

The development of new technologies and features that can improve the performance and functionality of hardware monitoring software. For example, some hardware monitoring software have integrated machine learning (ML) capabilities that can provide predictive analytics, anomaly detection, root cause analysis, and optimization recommendations for hardware components. Some hardware monitoring software have also incorporated augmented reality (AR) and virtual reality (VR) features that can provide immersive and interactive visualization of hardware status and performance. These features can make the hardware monitoring software more intelligent and user-friendly.

The emergence of new competitors and products that can challenge the existing market leaders. For example, some cloud service providers such as Amazon Web Services (AWS), Microsoft Azure, and Google Cloud Platform (GCP) have launched their own hardware monitoring software that can monitor the hardware performance of cloud servers and services. Some open-source platforms such as Prometheus, Grafana, and InfluxDB have also offered hardware monitoring software that can monitor the hardware

performance of various systems and platforms. These products can pose a threat to the market share of hardware monitoring software and force them to innovate and differentiate themselves.
