The Harmonic equatorial mount is a high-precision astronomical telescope equatorial mount that uses a harmonic reduction drive system. It is designed for celestial tracking and astronomical photography. Compared with traditional worm gear equatorial mounts, the harmonic equatorial mount uses a harmonic drive to replace the conventional gear system. It has the advantages of compact structure, light weight, gapless reversal and high load ratio. It can achieve extremely stable and high-precision constant speed tracking, thereby greatly improving image clarity during long exposure. This type of equatorial mount usually has a dual-axis automatic guide interface and a polar axis calibration system, supports portable settings and automated control, and is widely used in deep space photography, field observations and portable observatories.

United States market for Harmonic Equatorial Mount is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
