The global Harmonic Gear Mount market size is predicted to grow from US\$ 58.1 million in 2025 to US\$ 106 million in 2031; it is expected to grow at a CAGR of 10.5% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Harmonic gear mounts are high-precision, compact rotating support structures that use harmonic gear transmission (SWG) technology. They are widely used in telescopes, electric optical platforms, industrial robots, and high-end tracking systems. Its core features are high reduction ratios, zero backlash, and extremely high positioning accuracy through the coupling of flexible gears and wave generators, which allows stable and smooth motion even in extremely subtle angle control. Compared with traditional worm gears, planetary gears and other structures, harmonic mounts provide better dynamic response and repeatable positioning performance with smaller size and lighter weight. They are particularly suitable for astronomical tracking, radar antenna adjustment, satellite ground station tracking, surgical robotic arms and other fields that require extremely high motion accuracy and low vibration. With the growing demand for intelligent optoelectronic devices and small precision platforms, harmonic gear mounts are becoming one of the key actuators in advanced control systems.

United States market for Harmonic Gear Mount is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
