Abstracts

The global Harpagophytum Procumbens Root Extract market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Harpagophytum Procumbens Root Extract is a botanical extract produced primarily from the tuberous secondary roots of Harpagophytum procumbens, a plant native to southern Africa and commercially known as devil's claw. In pharmaceutical and traditional herbal applications, closely related Harpagophytum zeyheri material may also be used under relevant specifications. Commercial production typically involves root cleaning, crushing, water or hydroalcoholic extraction, filtration, concentration, drying or liquid formulation, standardization and quality testing. The extract contains iridoid glycosides, with harpagoside serving as the principal marker compound for quality control and standardized products. Commercial specifications include different extract ratios, dry, soft and liquid forms, and products manufactured through water or alcohol-based extraction systems. Harpagophytum Procumbens Root Extract is supplied as an ingredient for food and dietary supplement formulations, pharmaceutical and herbal medicinal products, cosmetic formulations and other health-related applications. The research focuses on commercially manufactured root extracts rather than botanical raw material itself and evaluates the product on the basis of extract specifications, processing form, extraction system, downstream application and industrial supply characteristics.

Key Findings

Global Harpagophytum Procumbens Root Extract sales were estimated at approximately 190 tons in 2025

+357 96 030922
info@marketpublishers.com

The average manufacturer-level selling price was approximately US$40 per kilogram in 2025

Gross margins of major manufacturers are generally estimated at approximately 28%–38%

Southern Africa is the strategic upstream source region for Harpagophytum raw material

Dry extract is the mainstream commercial form for standardized nutraceutical and pharmaceutical applications

Market Trends

The Harpagophytum Procumbens Root Extract industry is gradually shifting from simple ratio extracts toward more standardized products with clearer botanical identity, controlled extraction conditions and defined harpagoside specifications. Downstream customers increasingly focus on traceability of root material, reproducible active-component profiles, solvent residues, microbiological limits and consistency between production batches. This favors suppliers capable of controlling the process from botanical sourcing through extraction and final standardization. Dry extracts remain important in dietary supplements and pharmaceutical formulations because of their handling stability, dosing convenience and compatibility with tablets and capsules, while liquid and soft extracts continue to serve more specialized formulation requirements. Another structural trend is increasing attention to sustainable harvesting and raw-material traceability because commercial supply depends heavily on wild or semi-wild resources in southern Africa. Product differentiation is therefore moving beyond extract ratio alone toward standardized harpagoside content, origin control, extraction technology, documentation quality and application-specific formulation support. Higher-value customers increasingly evaluate the complete quality profile rather than selecting suppliers solely on price per kilogram.

Market Dynamics

Drivers

Demand for Harpagophytum Procumbens Root Extract is supported by continued use of botanical ingredients in dietary supplements, herbal medicinal products and health-oriented formulations. Devil’s claw has an established commercial presence in

+357 96 030922
info@marketpublishers.com

European herbal medicine and nutraceutical markets, giving the ingredient a relatively mature application base compared with many newly introduced botanicals. Consumer interest in plant-derived ingredients and broader product development in mobility, joint-health and general wellness formulations support recurring demand for standardized extracts. The existence of recognized pharmacopoeial and herbal medicinal quality frameworks in major markets also encourages the use of characterized root extracts rather than unstandardized botanical powders in higher-value products. On the supply side, established extraction manufacturers in Europe, North America, South Africa and China provide different extract ratios, harpagoside specifications and dosage-form compatible formats, improving ingredient accessibility for downstream formulators. Growth is therefore driven more by gradual penetration of standardized extracts and broader formulation adoption than by rapid expansion of the underlying botanical category.

Restraints

The most important restraint is the limited and geographically concentrated raw-material base. Harpagophytum procumbens grows mainly in southern Africa, and commercial supply depends on harvesting of underground secondary roots, making sustainable collection practices, regeneration cycles, climatic conditions and local sourcing controls important constraints on raw-material availability. Variations in botanical origin and harvest conditions can also affect iridoid glycoside composition and extraction yield. This creates greater raw-material variability than is typically encountered with highly standardized agricultural crops. Manufacturing economics are additionally influenced by extraction ratio, solvent consumption, concentration and drying costs, standardization requirements and analytical testing. Higher-harpagoside products require tighter raw-material selection and process control, while low-cost ratio extracts compete more directly on price. The market also faces substitution from other botanical ingredients used in joint-health and wellness formulations, as well as from non-botanical active ingredients, which limits the pricing power of suppliers when downstream formulators have multiple ingredient options.

Opportunities

The most attractive opportunities are concentrated in standardized and traceable Harpagophytum Procumbens Root Extract rather than basic low-specification ratio extracts. Manufacturers able to provide defined harpagoside levels, validated extraction processes, consistent chromatographic profiles and strong documentation can target pharmaceutical, premium nutraceutical and regulated-market customers that place greater emphasis on ingredient reproducibility. Sustainable sourcing also offers room for

+357 96 030922
info@marketpublishers.com

differentiation because downstream brands increasingly evaluate botanical origin, harvesting practices and supply-chain continuity when selecting strategic raw materials. Product development opportunities exist in convenient dosage forms, combination formulations and health products positioned around mobility, active aging and everyday wellness. Liquid and soft extracts can also support specialized beverage, liquid supplement and cosmetic formulations where dry powders are less suitable. In addition, Chinese extract manufacturers have opportunities to move from conventional ratio extracts toward higher-standardized products, while European suppliers can strengthen premium positioning through pharmaceutical-grade documentation, process validation and long-term sourcing relationships with southern African raw-material networks.

Challenges

The industry faces a continuing challenge in balancing sustainable raw-material procurement with consistent commercial supply. Because the economically valuable material is obtained from underground secondary roots, inappropriate harvesting practices can reduce plant regeneration and weaken long-term resource availability. Suppliers therefore need reliable sourcing networks and effective traceability rather than relying solely on spot-market procurement. Another challenge is the absence of a single global commercial specification. The market includes simple extract-ratio products, standardized harpagoside extracts, liquid extracts, soft extracts and products manufactured using different solvent systems, making direct price and quality comparisons difficult. Analytical methodology and the expression of harpagoside or total iridoid content can also vary among suppliers and applications. At the downstream level, regulatory treatment differs across food, pharmaceutical and cosmetic uses and between countries, requiring manufacturers to maintain application-specific documentation. These factors increase qualification costs and favor suppliers with stable quality systems, analytical capability and established regulatory experience.

Industry Chain Analysis

The upstream industry chain is centered on Harpagophytum root material originating mainly from southern Africa. Raw-material economics are influenced by collection areas, harvesting practices, drying conditions, botanical identification, transportation and export logistics. Water, ethanol and other permitted extraction solvents, carriers such as maltodextrin, processing aids, packaging materials and laboratory reagents form the main auxiliary inputs. Because the quality and harpagoside profile of the root can vary by origin and collection conditions, raw-material inspection, botanical authentication and active-component testing play an unusually important role before

+357 96 030922
info@marketpublishers.com

extraction. Sustainable sourcing and continuity of supply therefore directly influence midstream production planning and inventory requirements.

Midstream processing covers cleaning, crushing, extraction, filtration, concentration, drying or liquid formulation, milling, sieving, standardization and quality control. Product value increases as manufacturers move from basic ratio extracts toward defined harpagoside specifications and application-specific quality systems. Extraction yield, solvent recovery, drying efficiency, analytical testing and batch standardization are important determinants of production cost and margin. Downstream customers include food and dietary supplement formulators, pharmaceutical and herbal medicine manufacturers, cosmetic companies and other health-related product developers. The value chain is therefore divided between raw-material access, extraction technology and quality standardization, with the highest-value relationships typically involving consistent specifications, regulatory documentation, traceable sourcing and long-term supply reliability rather than commodity extract volume alone.

Segment Insights

By extract ratio, the market covers products at ?10:1, >10:1–20:1 and >20:1. Lower and medium extract ratios represent the broader commercial base because they can serve a wide range of nutraceutical and general botanical formulations at competitive cost. Higher extract-ratio products are more concentrated but are not automatically equivalent to higher harpagoside content, making active-component standardization increasingly important for professional buyers. As a result, extract ratio remains a practical commercial specification, while sophisticated customers increasingly evaluate it together with harpagoside assay, extraction solvent, carrier content and analytical profile.

By form, dry extract is the mainstream product because it offers better storage stability, easier transportation and straightforward use in tablets, capsules, powders and premixes. Soft extracts occupy a smaller but technically distinct position between dry and liquid products, while liquid extracts are used where formulation flexibility or direct incorporation into liquid systems is preferred. By extraction solvent, water-based and alcohol-based processes represent the principal commercial approaches. Water extraction supports solvent-sensitive positioning, while alcohol-containing extraction systems can provide different selectivity for botanical constituents. The commercial value of each segment ultimately depends on the combination of extraction method, concentration level, active-marker specification and downstream quality requirements rather than on a single classification variable.

+357 96 030922
info@marketpublishers.com

Downstream Market Opportunities

Food and dietary supplements represent a major commercial outlet for Harpagophytum Procumbens Root Extract, particularly in capsules, tablets and other wellness formulations where standardized dry extracts can be incorporated efficiently. Pharmaceutical and herbal medicine applications form a higher-specification segment in which botanical identity, extraction conditions, harpagoside content and quality documentation carry greater importance. Cosmetic applications are smaller but provide opportunities for liquid and specialty botanical extracts used in topical and personal-care formulations. Across these downstream markets, the strongest opportunity lies in moving from generic botanical ingredients toward application-specific products with defined active markers, clear traceability and formulation support. This transition can increase customer retention and reduce direct price comparison with low-specification extract suppliers.

Regional Insights

Southern Africa occupies a strategic upstream position because it is the principal natural origin of Harpagophytum raw material. The region’s role is therefore defined more by botanical resource supply, harvesting and primary processing than by global downstream extract consumption. Raw-material availability, sustainable collection practices and export logistics in producing countries have direct implications for the global supply chain. South African extract manufacturers also benefit from proximity to botanical resources and can participate further downstream through extraction and standardized ingredient production.

Europe is one of the most established commercialization regions for Harpagophytum Procumbens Root Extract, supported by a mature botanical medicine industry, established extraction companies and longstanding use of devil’s claw in herbal preparations and dietary supplements. Spain, Germany, Italy and France host multiple specialized botanical extract manufacturers, giving Europe a strong position in standardized and pharmaceutical-oriented products. China has developed an active manufacturing base for ratio extracts and standardized botanical ingredients and competes through flexible specifications and cost-efficient processing. North America represents an important nutraceutical and botanical ingredient market, while future regional development will continue to depend on regulatory acceptance, consumer familiarity with botanical ingredients and access to traceable southern African raw material.

+357 96 030922
info@marketpublishers.com

Competitive Landscape Analysis

The Harpagophytum Procumbens Root Extract market is fragmented and combines established European botanical extract specialists, North American botanical ingredient manufacturers, southern African resource-linked processors and Chinese plant extract producers. Competition differs substantially by product tier. Standard ratio extracts compete primarily on price, extraction efficiency, specification flexibility and delivery capability, while standardized products compete more strongly on harpagoside content, analytical consistency, process documentation, traceability and regulatory support. European suppliers generally have stronger positioning in pharmaceutical and higher-specification botanical applications, whereas Chinese suppliers provide broad extract-ratio options and flexible customized production. Southern African manufacturers possess strategic advantages through proximity to the botanical resource base but must convert raw-material access into standardized processing and international market qualification to capture greater value. Because total market volume remains relatively limited, scale alone is unlikely to determine competitive leadership. Long-term differentiation is more closely related to sustainable sourcing, reproducible extract quality, recognized analytical methods, customer-specific documentation and the ability to maintain reliable supply despite fluctuations in wild-harvested raw material.

Report Scope

LP Information, Inc. (LPI) ' newest research report, the “Harpagophytum Procumbens Root Extract Industry Forecast” looks at past sales and reviews total world Harpagophytum Procumbens Root Extract sales in 2025, providing a comprehensive analysis by region and market sector of projected Harpagophytum Procumbens Root Extract sales for 2026 through 2032. With Harpagophytum Procumbens Root Extract sales broken down by region, market sector and sub-sector, this report provides a detailed analysis in US$ millions of the world Harpagophytum Procumbens Root Extract industry.

This Insight Report provides a comprehensive analysis of the global Harpagophytum Procumbens Root Extract landscape and highlights key trends related to product segmentation, company formation, revenue, and market share, latest development, and M&A activity. This report also analyzes the strategies of leading global companies with a focus on Harpagophytum Procumbens Root Extract portfolios and capabilities, market entry strategies, market positions, and geographic footprints, to better understand these firms’ unique position in an accelerating global Harpagophytum Procumbens Root Extract market.

+357 96 030922
info@marketpublishers.com

This Insight Report evaluates the key market trends, drivers, and affecting factors shaping the global outlook for Harpagophytum Procumbens Root Extract and breaks down the forecast by Extract Ratio, by Application, geography, and market size to highlight emerging pockets of opportunity. With a transparent methodology based on hundreds of bottom-up qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global Harpagophytum Procumbens Root Extract.

This report presents a comprehensive overview, market shares, and growth opportunities of Harpagophytum Procumbens Root Extract market by product type, application, key manufacturers and key regions and countries.

1 SCOPE OF THE REPORT

1.1 Market Introduction
1.2 Years Considered
1.3 Research Objectives
1.4 Market Research Methodology
1.5 Research Process and Data Source
1.6 Economic Indicators
1.7 Currency Considered
1.8 Market Estimation Caveats

2 EXECUTIVE SUMMARY

2.1 World Market Overview
  2.1.1 Global Harpagophytum Procumbens Root Extract Annual Sales 2021-2032
  2.1.2 World Current & Future Analysis for Harpagophytum Procumbens Root Extract by Geographic Region, 2021, 2025 & 2032
  2.1.3 World Current & Future Analysis for Harpagophytum Procumbens Root Extract by Country/Region, 2021, 2025 & 2032
2.2 Harpagophytum Procumbens Root Extract Segment by Extract Ratio
  2.2.1 ?10:1
  2.2.2 >10:1–20:1
  2.2.3 >20:1
  2.2.4 Harpagophytum Procumbens Root Extract Sales by Extract Ratio
    2.2.4.1 Global Harpagophytum Procumbens Root Extract Sales Market Share by Extract Ratio (2021-2026)
    2.2.4.2 Global Harpagophytum Procumbens Root Extract Revenue and Market Share by Extract Ratio (2021-2026)
    2.2.4.3 Global Harpagophytum Procumbens Root Extract Sale Price by Extract Ratio (2021-2026)
2.3 Harpagophytum Procumbens Root Extract Segment by Form
  2.3.1 ry Extract
  2.3.2 Soft Extract
  2.3.3 Liquid Extract
  2.3.4 Harpagophytum Procumbens Root Extract Sales by Form
