The global Hatchery Management Software market size is predicted to grow from US\$ 292 million in 2025 to US\$ 394 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

Hatchery management software is an integrated information management system designed for the poultry hatching industry. It realizes digital control of the entire hatching process through the Internet of Things, big data and automated control technology. Its core functions include: 1) Intelligent control of environmental parameters, real-time monitoring and automatic adjustment of key indicators such as temperature and humidity, ventilation, and egg turning frequency to ensure a stable environment for embryo development; 2) Closed-loop management of production data, integrating modules such as egg traceability, hatching process tracking, and chick quality inspection, and optimizing batch cycles, hatching rates, and yield rates through data modeling; 3) Biosafety prevention and control system, combined with inventory warning, disinfection log, immunization records and other functions, to build a full-chain traceability system from egg storage to chick delivery, significantly improving production efficiency and quality controllability.

The software uses algorithm-driven decision support to predict production capacity fluctuations based on historical data, optimize resource allocation, and generate visual reports that meet industry standards, helping hatcheries achieve lean production and supply chain collaboration. Its modular architecture supports customized deployment, adapts to the production management needs of enterprises of different sizes, effectively reduces human operation errors, strengthens biological asset risk management, and becomes a key infrastructure for the intelligent transformation of modern poultry industry.
