Pregnancy test strips are a relatively effective means to assist clinical determination of pregnancy. The detection principle is to diagnose whether a woman is pregnant by detecting the concentration of HCG in urine. HCG is human chorionic gonadotropin, which is a A glycoprotein produced by the placenta and excreted in the urine via the glomerulus. CORE HCG colloidal gold detection kit adopts double antibody sandwich one-step technology, and uses colloidal gold as an indicator to detect the concentration of HCG in urine to diagnose whether a woman is pregnant.
