A HD wireless periscope is a periscope device that has high-definition image acquisition and wireless transmission functions. It usually consists of a lens, image sensor, wireless transmission module, display screen (optional), and other components. The lens is used to collect image information of the target area, and high-resolution image sensors convert these optical signals into digital signals, which are optimized through advanced image processing techniques to obtain clear and realistic images. The wireless transmission module sends the processed image data wirelessly (such as Wi Fi, Bluetooth, etc.) to the receiving end, which can be a smartphone, tablet, or other display device. The high-definition wireless periscope has the characteristics of small size, portability, and flexible operation.
