An HDBaseT splitter is a device that distributes audio, video, and control signals based on HDBaseT technology. It transmits high-definition video (up to 4K/8K), audio, Ethernet, control signals (RS232, infrared), USB, and power (PoH) over long distances using a single standard Cat5e/6 network cable, simultaneously distributing a single signal source to multiple display terminals or receivers. Compared to traditional HDMI splitters, HDBaseT splitters offer advantages such as longer transmission distances (up to 100 meters or longer), more stable signals, and support for "5Play" multi-signal transmission.

The core component is the HDMI converter chip, represented by Analog Devices, Lontium, and Parade. Downstream applications include enterprise, education, and broadcasting.
