HDMI Active Optical Cables (AOCs) are high-speed data transmission cables that use fiber optic technology to carry high-definition multimedia interface (HDMI) signals over longer distances than traditional copper cables. They contain a light source, usually a laser or LED, at one end to convert the HDMI signal into light signals, which are then transmitted through an optical fiber to the other end, where they are converted back into an HDMI signal. AOCs are used in professional AV installations and home theater setups that require high bandwidth and resistance to interference.

United States market for HDMI Active Optical Cables is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
