The global HDMI Splitter market size is predicted to grow from US\$ 6193 million in 2025 to US\$ 14370 million in 2032; it is expected to grow at a CAGR of 13.0% from 2026 to 2032.

In 2024, the global production of HDMI splitter will reach 18.75 million units, with an average selling price of US\$300 per unit. An HDMI splitter is a device that distributes audio and video signals. Its primary function is to transmit the HDMI signal from a single source device (such as a computer, set-top box, Blu-ray player, or game console) simultaneously to multiple display devices (such as TVs, projectors, and monitors) after internal signal amplification and equalization, ensuring consistent signal quality at each display port. It typically supports lossless transmission of HD video and multi-channel audio and is compatible with protocols such as EDID (Display Device Identification Data) and HDCP (High-Definition Digital Content Protection), ensuring stable connectivity and content protection across various display devices. HDMI splitters vary in port count, offering models with 1 in/2 out, 1 in/4 out, or 1 in/8 out. Some high-end models also support long-distance transmission, signal cascading, ultra-HD resolutions (such as 4K and 8K), HDR dynamic range, and HDBaseT extension. HDMI splitters are widely used in home theaters, conferencing systems, education and training, exhibitions, security surveillance, and commercial displays, forming a core component of modern digital video distribution and multi-screen simultaneous playback.

The core component is the HDMI converter chip, represented by Analog Devices, Lontium, and Parade. Downstream applications include enterprise, education, and broadcasting.

The HDMI splitter market is currently experiencing steady growth, driven by the increasing adoption of ultra-high-definition video, home theaters, commercial displays, and educational conferences, resulting in robust market demand. With the increasing

popularity of 4K/8K resolutions, HDR (High Dynamic Range), and high refresh rate content, users are placing higher demands on bandwidth, compatibility, and transmission stability in signal distribution equipment, driving product upgrades toward higher performance, multiple ports, and support for HDCP 2.3 and HDMI 2.1 standards. Furthermore, long-distance transmission technologies such as HDBaseT and fiber-optic HDMI are increasingly being adopted in high-end splitters to meet the needs of specialized markets such as large conference centers, security surveillance, and command and dispatch. In terms of market competition, mid- and low-end products are primarily marketed by consumer electronics peripheral manufacturers, offering transparent pricing and significant homogeneity. High-end and engineering applications, on the other hand, are dominated by a small number of manufacturers with R&D and protocol compatibility capabilities, resulting in relatively higher profit margins. Overall, the HDMI splitter market is expected to maintain moderate growth over the next few years, driven by the expansion of high-definition and multi-screen applications. However, fierce price competition in the low-end market will further concentrate industry profits on mid- and high-end applications and products supporting new standards.
