HDPE Hollow Wall Winding Pipes are a kind of pipe made of HDPE as raw material to produce rectangular pipe blanks and formed by winding and welding. Due to its unique molding process, it can produce large-diameter pipes with a diameter of up to 3000mm, which is difficult or even impossible to complete with other production processes. This kind of pipe is basically the same as the double-wall corrugated pipe in terms of performance. The pipe connection mainly uses hot melt tape connection, and the connection cost is slightly higher than that of the double-wall corrugated pipe. In addition, a major disadvantage of this pipe is that it has the same diameter and reaches the same environment. Under the stiffness, it generally consumes more raw materials than directly extruded double-wall corrugated pipes, so its production cost is higher.

The global HDPE Hollow Wall Winding Pipes market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
