The global HDPE Lined Steel Pipe Installation Service market size is predicted to grow from US\$ 2612 million in 2025 to US\$ 5283 million in 2032; it is expected to grow at a CAGR of 10.7% from 2026 to 2032.

HDPE-lined steel pipe installation service refers to the full-process service provided by professional construction teams for the on-site laying, connection, fixing, and commissioning of steel pipes with an inner coating or lining of high-density polyethylene (HDPE). This service aims to combine the high-strength structural performance of steel pipes with the corrosion-resistant and wear-resistant properties of HDPE to ensure long-term safe, corrosion-resistant, and efficient transportation of pipeline systems in fields such as water treatment, heating, chemical, oil and gas, and municipal engineering. The installation process includes pipe section docking, welding or flange connections, support fixing, leak detection, and acceptance, providing a comprehensive solution from construction to commissioning to guarantee the reliability and service life of the pipeline system.

The HDPE-lined steel pipe installation service industry chain mainly covers three links: upstream material supply, midstream construction services, and downstream application scenarios. The upstream supply chain provides high-quality steel pipes, HDPE lining materials, welding and connectors, as well as design and engineering consulting services. Midstream, professional construction teams perform installation and construction services such as pipeline laying, welding, flange connections, support and fixation, leak detection, and system commissioning to ensure reliable pipeline system operation. Downstream applications cover municipal water supply, industrial chemicals, oil and gas, heat transmission, and environmental engineering. The entire industry chain also involves value-added services such as construction technology training,

installation standard setting, and after-sales maintenance to ensure the long-term stability and safety of the pipeline system. The gross profit margin is approximately 25%.
