A headless ecommerce system includes core functionalities such as inventory, product management, and a shopping cart, but allows those features to be deployed quickly and easily to multiple platforms, such as a brand's website, Facebook, Amazon, and any other place online where customers can make purchases.

The headless ecommerce system helps companies manage this by using APIs to push consistent copy, images, and layouts from a single back-end system to each platform. This way, they don't need to reconfigure their branding manually as they reach out to customers across the web. Beyond that, the system allows transactions to take place wherever the customer may be, leading to a more organic experience and more conversions.

The global Headless Ecommerce Software market size is projected to grow from US\$ 1427.3 million in 2023 to US\$ 2444.1 million in 2030; it is expected to grow at a CAGR of 8.0% from 2024 to 2030.
