Automotive headliner is the covering provided on the inside of the vehicle roof. The automotive industry has witnessed a consistent rise in demand for good interior esthetics and hence, automakers have been constantly working to design more comfy and cozy vehicle interiors.

Headliner substrate can be manufactured from thermoplastics or thermoset according to specific applications. Different types of fabrics are utilized as a laminate material for enhanced esthetics. Automotive headliners are manufactured from cushions and fabrics, as they possess good absorption property of vibration and sound; furthermore, they protect the occupants of the vehicle from injury caused due to direct impact on the roof of the vehicle. Fabric material, currently, holds a considerable share of the automotive headliner (OE) market. Materials such as leather, Miko, and Alcantara are used in premium vehicles for laminating the headliner.
