Aircraft Head-up Display presents information to the pilot in the line of their external forward vision which projects key flight instrument data onto a small 'see-through' screen positioned just in front of the pilot line of sight looking ahead out of the aircraft.

HUDs can improve situational awareness for pilots and reduce their workload. They also improve airport access as part of an Enhanced Flight Vision System. The operational benefits of HUDs have encouraged commercial airlines such as China Eastern Airlines and Qatar Airways to equip their new fleets with HUDs. The business aviation sector has witnessed a growing demand for HUD-equipped aircraft. Business jet operators and owners seek advanced avionics solutions to enhance the safety and performance of their aircraft, driving the demand for HUD systems. In 2013 China Eastern Airlines placed an order for 58 Boeing Next-Generation 737 aircraft installed with Rockwell Collins' HUD systems; in 2015, Qatar Airways announced that it would install HUDs in its A350 XWBs and A380 aircraft fleets. In the same year, China-based Hainan Airlines also announced the installation of Rockwell Collins' HUD systems in its next-generation Boeing 737 aircraft and flight simulators.
