The global Health Products Analysis Service market size is predicted to grow from US\$ 1389 million in 2025 to US\$ 2488 million in 2032; it is expected to grow at a CAGR of 8.7% from 2026 to 2032.

Health supplement analysis services refer to the services provided by third-party testing and certification bodies, professional laboratories, functional evaluation institutions, and compliance technical service organizations to health foods, dietary supplements, nutritional supplements, natural health products, sports nutrition products, plant extract preparations, and related raw and auxiliary materials. These services include component identification, determination of effective/marker ingredient content, nutritional component analysis, safety testing, contaminant screening, microbial testing, detection of illegally added and prohibited substances, stability testing, shelf-life studies, label claim verification, functional evaluation, and pre-certification testing.

From a demand structure perspective, growth is primarily driven by five factors: increased brand requirements for the authenticity of label claims and the stability of ingredient content; increased consumer and channel emphasis on third-party certification marks; stricter requirements for supplement compliance testing from cross-border e-commerce and large retail platforms; increased regulatory attention to evidence regarding illegal additives, heavy metals, microorganisms, pesticide residues, and functional claims; and increased demand for specialized methodologies in sub-categories such as sports nutrition, probiotics, fish oil, herbal supplements, melatonin, and coenzyme Q10. Due to the complexity of supplement product formulations, the global sourcing of raw materials, and significant batch variations, testing services have expanded from single-product sampling to raw material release, supplier audits, stability verification, label updates, post-market sampling, and certification maintenance.
